2 Reference Material

This section records information for easy reference.

2.1 Abbreviations and Acronyms

symbol	description
Natural Language Processing for Mental Health Risk Prediction [... —SS]	Explanation of program name [... —SS]

Contents

List of Tables

List of Figures

3 Introduction

4 Purpose

5 Scope

This system is designed to act as a supplementary tool that can aid mental health professionals by leveraging Natural Language Processing technologies to help recognize and diagnose various mental health afflictions. The intent for the project is not to act as a standalone process for diagnosing a subject, but rather to help mental health professionals get a secondary opinion for their diagnoses, or to act as indicators for symptoms they may have previously missed and should look further into.
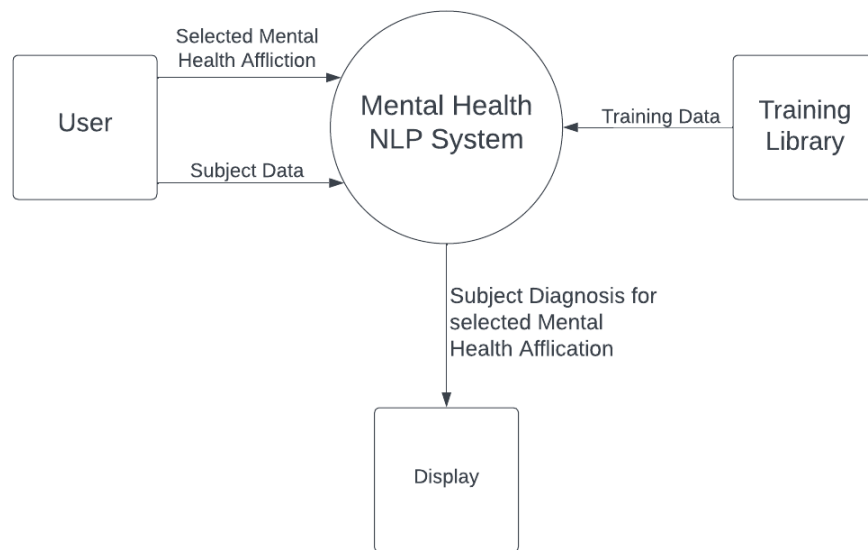

5.1 Context Diagram

Figure 1: Mental Health NLP Context Diagram

6 Project Overview

6.1 Normal Behaviour

6.2 Undesired Event Handling

[How you will approach undesired events —SS]

6.3 Component Diagram

6.4 Connection Between Requirements and Design

[The intention of this section is to document decisions that are made "between" the requirements and the design. To satisfy some requirements, design decisions need to be made. Rather than make these decisions implicit, they are explicitly recorded here. For instance, if a program has security requirements, a specific design decision may be made to satisfy those requirements with a password. —SS]

7 System Variables

[Include this section for Mechatronics projects —SS]

7.1 Monitored Variables

7.2 Controlled Variables

7.3 Constants Variables

8 User Interfaces

[Design of user interface for software and hardware. Attach an appendix if needed. Drawings, Sketches, Figma —SS]

9 Design of Hardware

[Most relevant for mechatronics projects —SS] [Show what will be acquired —SS] [Show what will be built, with detail on fabrication and materials —SS] [Include appendices as appropriate, possibly with sketches, drawings, CAD, etc —SS]

10 Design of Electrical Components

[Most relevant for mechatronics projects —SS] [Show what will be acquired —SS] [Show what will be built, with detail on fabrication and materials —SS] [Include appendices as appropriate, possibly with sketches, drawings, circuit diagrams, etc —SS]

11 Design of Communication Protocols

[If appropriate —SS]

12 Timeline

[Schedule of tasks and who is responsible —SS]

A   Interface

B   Mechanical Hardware

C   Electrical Components

D   Communication Protocols

E   Reflection

The information in this section will be used to evaluate the team members on the graduate attribute of Problem Analysis and Design. Please answer the following questions:

1. What are the limitations of your solution? Put another way, given unlimited resources, what could you do to make the project better? (LO_ProbSolutions)

2. Give a brief overview of other design solutions you considered. What are the benefits and tradeoffs of those other designs compared with the chosen design? From all the potential options, why did you select documented design? (LO_Explores)
